The study of orthopaedics and fractures is hugely important to every undergraduate medical student, and it is difficult finding the right textbook that will give them a sufficient level of knowledge and help them through their examinations. "Textbook of Orthopaedics" is just such a book, giving more than enough information, while at the same time focussing on the main goal - passing the orthopaedics exam. The book is divided into 8 sections, which deal with the obligatory, standard areas of study, such as general orthopaedics, regional injuries, and both traumatic and non-traumatic disorders. But there are also innovative sections which discuss amputations, prosthetics, sports medicine, arthroplasty and arthroscopy, and the final section of appendices gives information about orthopaedic implants and instrumentation in common use, as well as tips and hints for practical exam sessions. The book is very "student friendly" with numerous excellent pedagogical features - diagrams, end of chapter summaries, flow charts, mnemonics, differential shading of tables and columns, anecdotes, jokes, and historical references. X-rays are

people From a reassessment of osteoporosis to contributing factors, clinical applications of antiosteoporotic agents, and rehabilitation, this book examines various aspects of the disease and its treatment. Edited and written from an orthopedic perspective, it approaches osteoporosis as both a metabolic disease and a locomotive syndrome. As orthopedic surgeons in Japan are responsible for pharmacotherapy, surgery, and pain control, the authors pursue a comprehensive approach, focusing especially on the effect on muscles and on fracture operation rather than expanding the scope to bone density. Osteoporosis in Orthopedics provides extensive content and insights for clinicians, researchers, medical students, and post-docs specializing in osteoporosis. It also offers a valuable resource for orthopedic and spine surgeons who need extensive knowledge of osteoporosis and bone metabolism in the context of patient care.
